SUMMARY

Aspiring Product Manager with 5+ years of enterprise software experience at Volvo Group and Wipro, owning the problem-to-production lifecycle for products used by 1,000+ global users. Proven in product discovery, user research, PRD writing, user stories, roadmap prioritization (RICE), and data-driven decision making with SQL and product analytics. Partners with engineering, QA, design, and business stakeholders to ship scalable features, with a strong technical foundation in REST APIs, microservices, and AI/LLM-powered workflow automation.

WORK EXPERIENCE

Software Engineer **April 2022 – Present**
Volvo Group *Bengaluru*

- Analyze user feedback, workflow data, and production issues across products supporting 1,000+ global users to identify opportunities for improvement and prioritize solutions based on business impact, user needs, and technical feasibility.
- Used SQL and data analysis to identify workflow bottlenecks and recurring issues, contributing to improvements that increased operational efficiency by 20% and reduced issue resolution time by 40%.
- Partner with business stakeholders and engineering teams to understand user and business problems, translate requirements into actionable solutions, and support initiatives from problem definition through production delivery.
- Supported SWBOM module modernization, analyzing usage patterns and business requirements to improve platform stability, workflow efficiency, and feature adoption.
- Collaborated with engineering, QA, and business teams to develop scalable backend services using Java, Spring Boot, and DB2, facilitating a 30% improvement in cross-team delivery velocity.
- Worked across the software development lifecycle to investigate issues, validate changes, support releases, and incorporate production feedback into subsequent improvement.

Project Engineer **June 2021 – March 2022**
Wipro Technologies *Bengaluru*

- Worked closely with customers, support teams, and engineering to resolve production issues, improving application reliability and reducing support tickets by 20%.
- Contributed to sprint planning, defect prioritization, testing, and release activities while maintaining technical documentation.
- Validated fixes through testing, supported releases, and maintained documentation of known issues and resolutions.

SKILLS

Product Management: Product Discovery, Product Strategy, Product Roadmap, Product Lifecycle Management, PRD Writing, User Stories, Acceptance Criteria, MVP Definition, Feature Prioritization (RICE), Requirements Gathering, Backlog Management, Go-to-Market Support, Stakeholder Management, Cross-Functional Collaboration, Agile/Scrum, Sprint Planning

Data & Analytics: Product Analytics, SQL, Amplitude, KPIs and Success Metrics, North Star Metric, A/B Testing, Experimentation, Funnel and Retention Analysis, Data-Driven Decision Making, Root Cause Analysis, Amplitude, Google Analytics

Research & Design: User Research, Customer Interviews, Personas, Jobs-to-be-Done (JTBD), User Journey Mapping, Workflow Design,Prototyping, Figma

Technical: REST APIs, Microservices, Java, Spring Boot, PostgreSQL, DB2, SDLC, GitHub, Enterprise Systems, API Integrations

AI & Automation: AI Product Development, AI Agents, LLMs, Prompt Engineering, Workflow Automation, Make.com, Apify

PROJECTS

GymBuddy – Capstone Project: AI Fitness Coach *Product Discovery, User Research, MVP, Product Analytics*

- Problem: users struggle to stay consistent with workouts, and retention drops in the first four weeks.
- Discovery: conducted user research with 50+ respondents to identify the barriers behind low workout consistency and four-week retention.
- Definition: defined the problem statement, target users, MVP scope, and requirements for an AI-powered personalized fitness product, and turned research findings into user stories and prioritized features.
- Solution: built a working prototype covering onboarding, AI-generated workout planning, adaptive check-ins, and personalized recommendations.
- Metrics: defined success metrics for activation, engagement, and four-week retention, linking each MVP feature to one of them.

ProtoSchedule — Enterprise Product Case Study *Product Discovery, Workflow Design, RICE Prioritization*

- Problem: When test planning and resource coordination happen across disconnected workflows, teams risk double-bookings, delayed test activities, and time-consuming manual follow-ups, creating a need for a centralized and reliable scheduling experience.
- Discovery: Identified scheduling challenges and stakeholder needs around resource availability, booking conflicts, test coverage, and workshop visibility to understand opportunities for a centralized scheduling solution.
- Definition: Defined target users, problem statement, MVP scope, and product requirements. Translated scheduling needs into user stories, acceptance criteria, and prioritized features.
- Solution: Designed a centralized scheduling solution covering resource availability, booking management, conflict detection, test coverage tracking, and workshop-level visibility.
- Metrics: Defined success metrics for scheduling efficiency, booking conflict rate, resource utilization, and test coverage visibility to evaluate the solution's impact.

AI-Powered Job Application Agent *AI Agents, Automation, LLMs, APIs, Product Automation*

- Problem: Job seekers spend significant time finding relevant openings, analyzing job descriptions, tailoring resumes for individual roles, and managing application-ready documents.
- Discovery: Examined the job-search workflow to identify repetitive manual tasks across job discovery, job description analysis, resume customization, and document delivery.
- Definition: Defined the automation workflow, key user requirements, and end-to-end process for matching job opportunities with relevant candidate experience and tailoring resumes to specific job descriptions.
- Solution: Built an AI-powered job-search automation workflow using Apify, Make.com, LLMs, Google Drive, and Gmail to discover job postings, extract and analyze job descriptions, generate tailored resumes using a saved resume format, and automatically deliver updated documents
- Metrics: Identified workflow metrics including time spent per job application, resume tailoring turnaround time, job-description-to-resume relevance, and successful document delivery rate to evaluate automation effectiveness.

Zomato — Retention & Engagement Product Case Study *Product Stratergy,User Journey Mapping, A/B Testing*

- Problem: Users may disengage from Zomato when the food-discovery and ordering journey does not provide enough relevant options, value, or reasons to return, creating opportunities to improve repeat engagement and retention.
- Discovery: Analyzed the user journey and potential drop-off points across food discovery, restaurant selection, cart, checkout, and repeat ordering to identify opportunities for improving engagement and retention.
- Definition: Defined the target user problem, key funnel stages, retention opportunities, and hypotheses for reducing friction and encouraging repeat orders. Prioritized potential improvements based on user impact and implementation effort.
- Solution: Developed product improvement hypotheses and an experiment-led approach focused on reducing ordering friction, improving food discovery, and encouraging repeat engagement through relevant recommendations and targeted retention interventions.
- Metrics: Defined success metrics across repeat-order rate, order conversion rate, funnel drop-off, and user retention, with supporting engagement metrics to evaluate the impact of proposed experiments.
